# Outline

1. Background
2. Introduction
3. Case Study
4. Metrics
5. Future Work

# Background

## Corridor Mobility Program

- Development, design, and construct improvements along key Austin corridors that enhance mobility, safety, and connectivity for all users.
- Recommendations supported by identifiable **metrics** to prioritize:
  - a) reduction in congestion
  - b) improved level of service for all modes of travel
  - c) connectivity, and improved effectiveness of transit operations

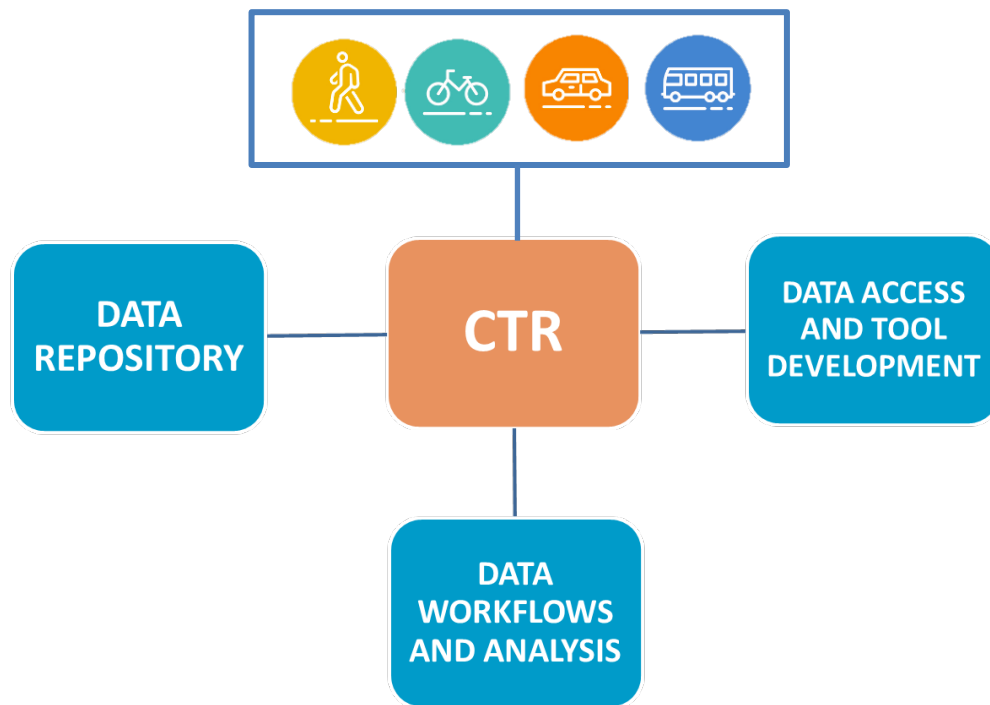

# Background

## Our Role

**Generate performance metrics for bond corridor evaluation by practitioners**

1. Identify current and future data sources
2. Complete back office system architecture capable of ingesting data from multiple sources
3. Develop a tool that uses data from multiple sources to calculate key performance metrics

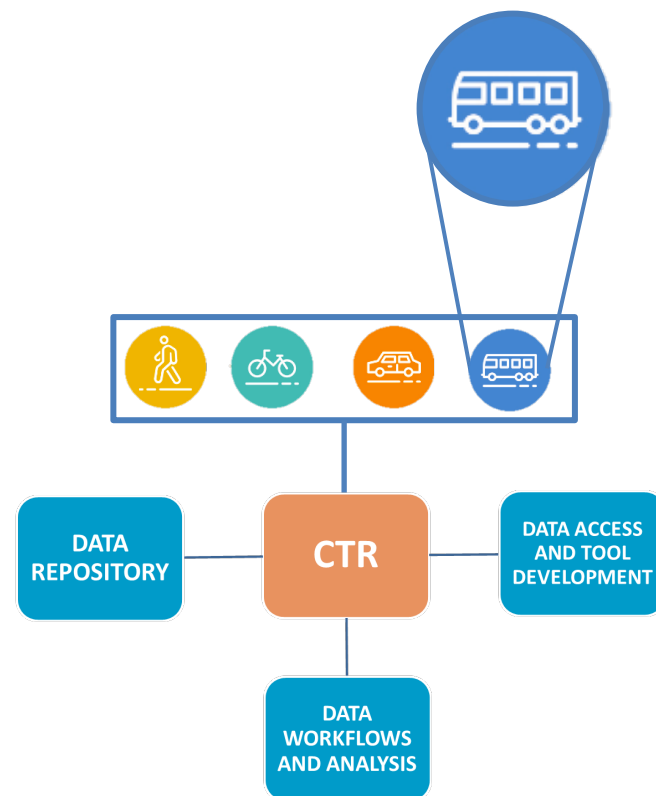

# Introduction

Recent advances in ITS transit data-collection allow evaluation of multiple operational variables.

## Problem

- Digesting and understanding the large amount of complex data available
- For arterial corridors: the presence of different traffic control systems, multiple transit routes, and multimodal interaction

## Objective

Develop an evaluation tool to provide **transit performance and reliability** information for arterial corridors in Austin, Texas.

# Case Study

# Metrics: Tool Development

## Data Sources

**GTFS**  
**AVL**  
**APC**

Vehicle Capacity

Automated  
Analysis

## Measurable Impacts

**Transit Speed**  
**Ridership**  
**Occupancy**  
**Dwell Time**

Delay  
Volume-to-Capacity  
Ratio  
Reliability  
Service Coverage  
Frequency

# Metrics: Transit Speed on Corridors

- Speed estimated using AVL data
  - GPS points (location & time stamp) for all buses
- Average speed through the corridor
  - Difference in time stamps over distance
  - Distance is corridor length covered by bus trajectory
- Challenges:
  - GPS points are provided every 1-2 minutes
    - The results may not be representative of the entire corridor
  - Different routes cover different corridor segments
  - Dwell times are included in travel time

# Metrics: Transit Speed on Corridors

## 1. Choose Analysis Type

Corridor Summary Traffic Volume Speed Travel Time Transit

Analysis Type

☐ Not Selected

☐ Buses and Alightings

☐ Dwell Time

☒ Transit Speed

☐ Occupancy

Choose Period 1

2017-01-08 to 2017-02-15

Choose Period 2

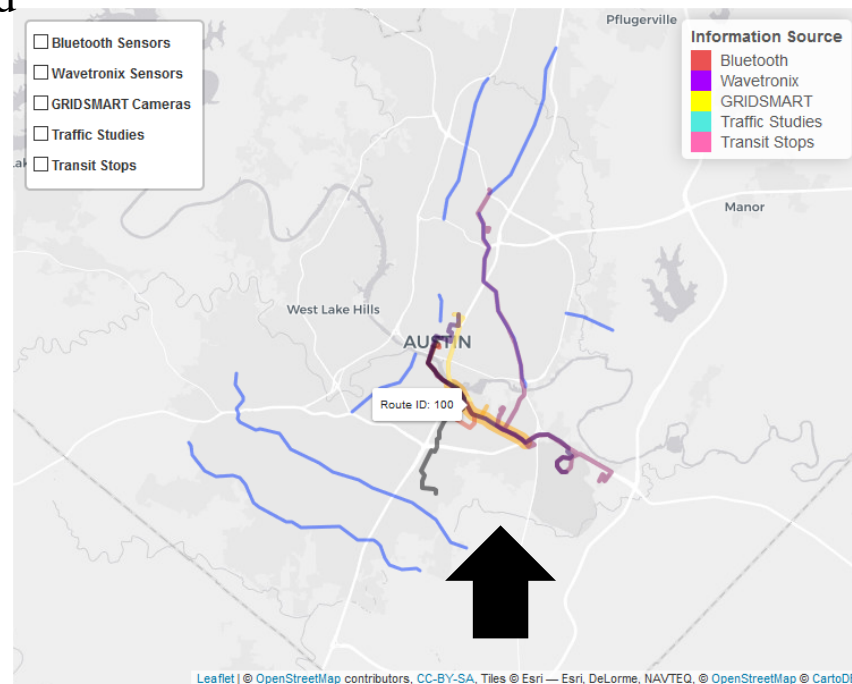

2017-04-02 to 2017-06-03

## 2. Select Dates and Corridor

Choose a corridor

E. Riverside

### Transit Average Speed by Time of Day and Direction

## 3. Visualize Transit Routes Serving Corridor for Analysis

## 4. Summarize Transit Speed Estimate by Hour and Direction

# Metrics: Occupancy

## 1. Choose Analysis Type

Corridor Summary Traffic Volume Speed Travel Time Transit

### Analysis Type

- ☐ Selected
- ☐ Stops and Alightings
- ☐ Time
- ☐ Travel Speed
- ☒ Occupancy

### Choose Period 1

2017-01-08 to 2017-02-15

### Choose Period 2

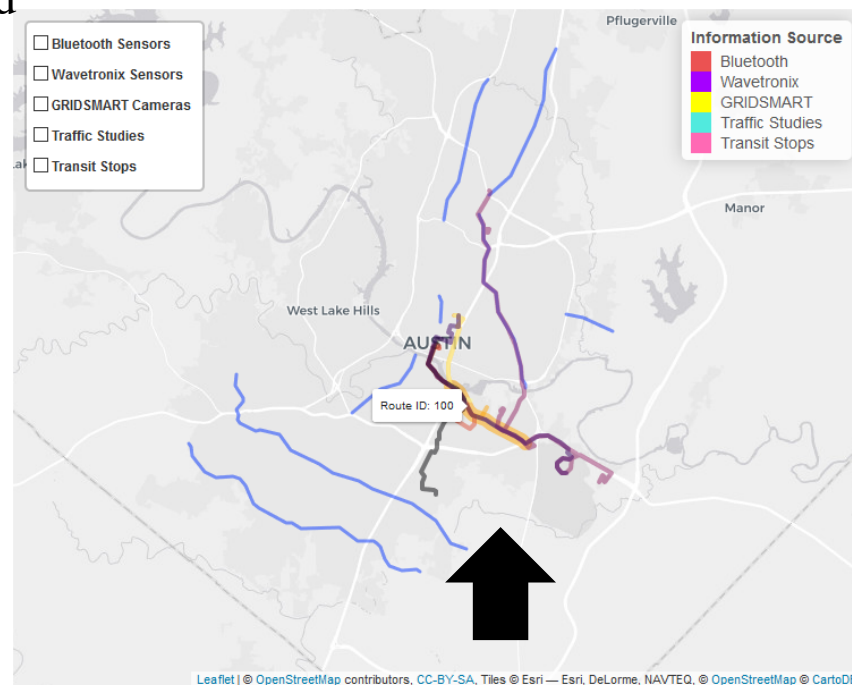

2017-04-02 to 2017-06-03

## 2. Select Dates and Corridor

Choose a corridor

E. Riverside

### Transit Average Occupancy by Hour

## 3. Visualize Transit Routes Serving Corridor for Analysis

## 4. Summarize Transit Occupancy by Hour

# Metrics: Boardings and Alightings

## 1. Choose Analysis Type

Corridor Summary Traffic Volume Speed Travel Time Transit

- Analysis Type
- ☐ None Selected
  - ☒ Boardings and Alightings
  - ☐ Dwell Time
  - ☐ Transit Speed
  - ☐ Occupancy

Choose Period 1

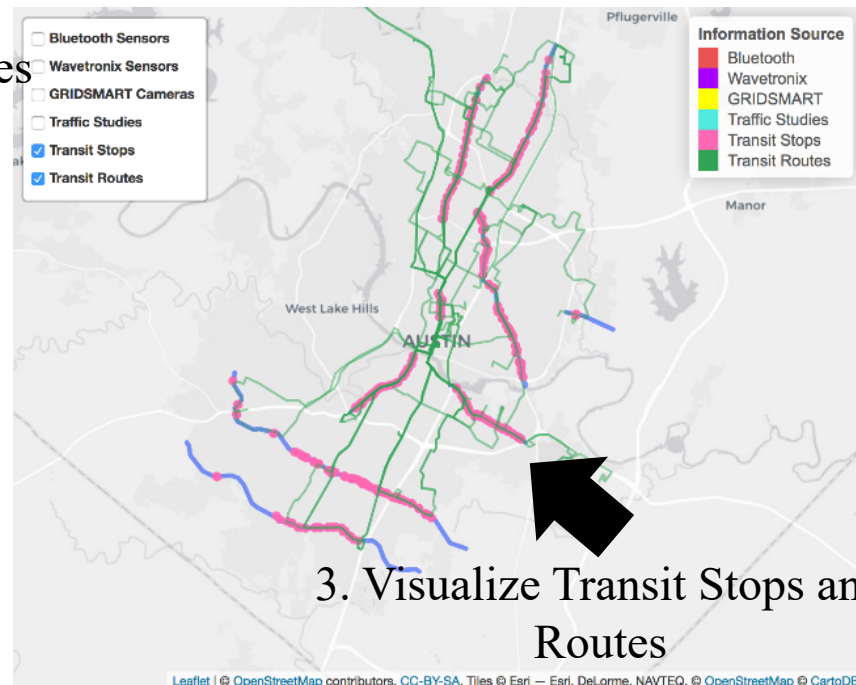

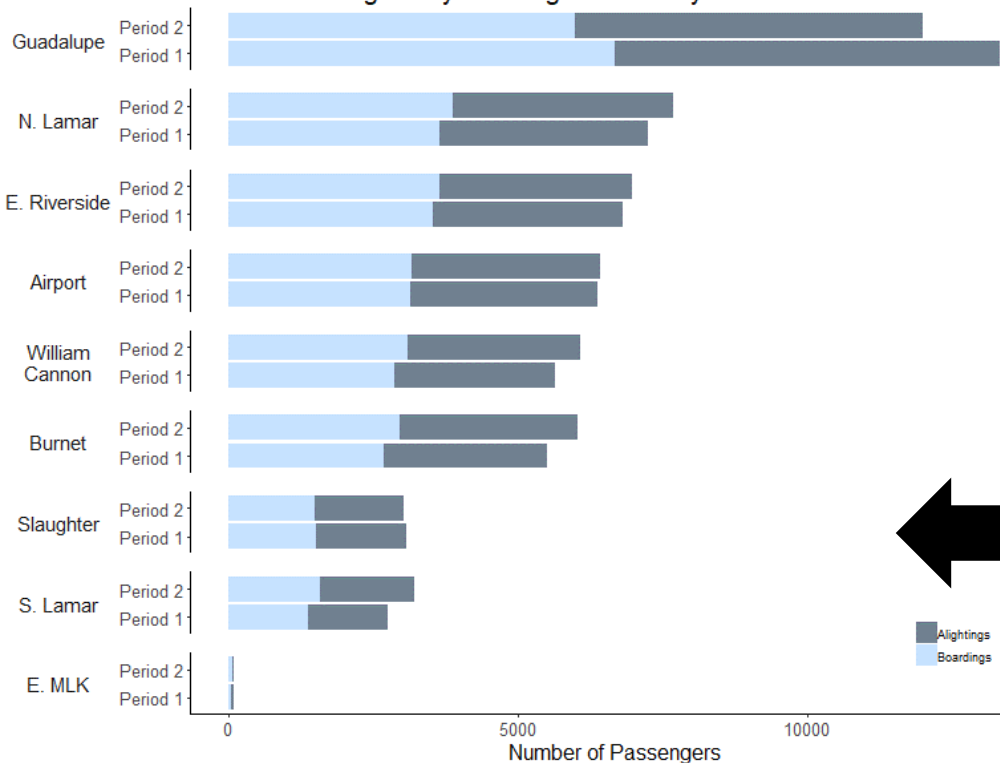

2017-01-08 to 2017-02-15

Choose Period 2

2017-04-02 to 2017-06-03

## 2. Select Dates

Average Daily Passenger Counts by Corridor and Period

## 3. Visualize Transit Stops and Routes

## 4. Summarize Passenger Counts (not normalized by number of stops)

# Metrics: Dwell Time

Corridor Summary

Traffic Volume

Speed

Travel Time

Transit

Analysis Type

- ☐ Unselected
- ☐ Boardings and Alightings
- ☒ Dwell Time
- ☐ Transit Speed
- ☐ Occupancy

Choose Period 1

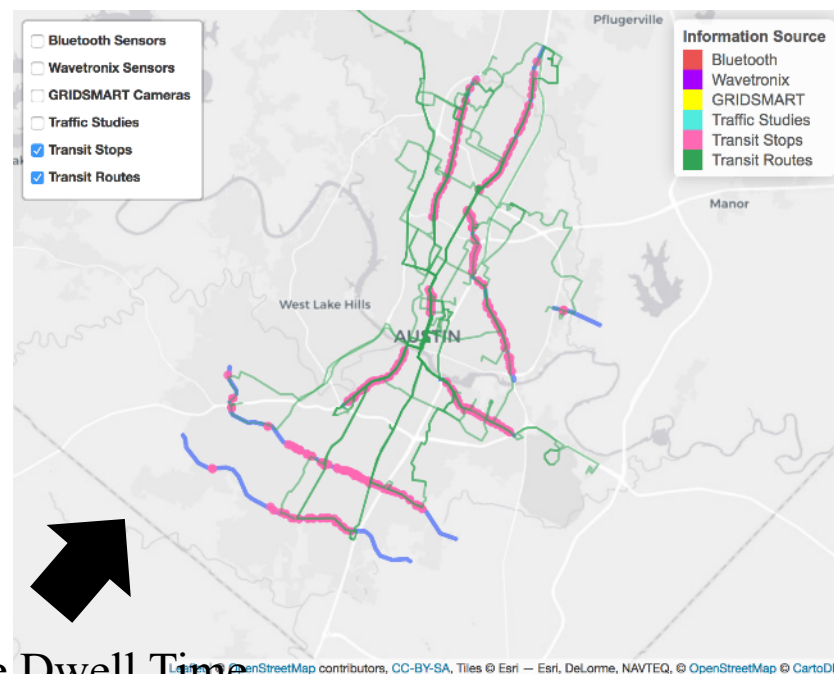

2017-01-08 to 2017-02-15

Choose Period 2

2017-04-02 to 2017-06-03

2. Select Dates

Average Dwell Time per Stop by Corridor and Period

3. Visualize Dwell Time and Transit Information

Period 1  
Period 2

# Future Work

- Estimate bus trajectory
  - Integrate AVL and APC
  - Update speed estimation
- Estimate bus on-time performance
  - Integrate GTFS and APC

# THANKS
